

Sailikith Kodumuri

Full Stack Developer

Location: - New York, USA | **Mail:** saikodumuri902@gmail.com | **Ph:** +1 475-290-0815 | **LinkedIn:** <https://www.linkedin.com/in/sailikithkodumuri/>

PROFESSIONAL SUMMARY:

- Full Stack Java Developer with nearly 5+ years of experience in software and financial domains, specializing in designing secure, scalable, and high-performance applications.
- Adept at building modular user interfaces using React.js, Redux Toolkit, and Tailwind CSS, and integrating RESTful and SOAP APIs to support enterprise-grade payment solutions.
- Skilled in microservices architecture with Java, Spring Boot, and Spring Cloud (API Gateway, Eureka, Config Server), coupled with API optimization using GraphQL and Next.js SSR for improved performance.
- Hands-on expertise in CI/CD automation with Jenkins, GitHub Actions, Docker, and Helm, deploying resilient applications to AWS EKS and leveraging databases such as Oracle (PL/SQL), MongoDB, and Redis via Spring Data and Hibernate JPA.
- Strong background in database optimization, achieving faster query responses in MySQL and MongoDB through effective indexing and modeling strategies.
- Proficient in ensuring compliance and security by implementing Spring Security features (OAuth 2.0, RBAC, tokenization) and modern authentication protocols including JWT and OIDC.
- Experienced in developing cross-platform applications with Java and JavaScript frameworks, enhancing performance, scalability, and user engagement.
- Contributed to fraud prevention initiatives by building real-time monitoring dashboards in Splunk integrated with AML rules, reducing detection times significantly.
- Maintains high code quality and reliability with JUnit 5, Mockito, Rest Assured, SonarQube, and JaCoCo, covering unit, integration, and contract testing within Agile development practices.

TECHNICAL SKILLS:

Programming Languages:	Java, JavaScript, TypeScript, SQL, PL/SQL
Frontend Technologies:	React.js, Next.js, Redux Toolkit, Tailwind CSS, HTML5, CSS3
Backend Frameworks:	Spring Boot, Spring Security, Spring Cloud, Hibernate JPA, RESTful APIs, SOAP APIs
Micro services & APIs:	Spring Cloud Config Server, Eureka, API Gateway, GraphQL, REST, SOAP
Security & Authentication:	OAuth 2.0, JWT, OIDC, RBAC, Tokenization, Spring Security
DevOps & CI/CD:	Jenkins, GitHub Actions, Docker, Helm, Kubernetes (AWS EKS)
Databases:	Oracle 19c, MongoDB, MySQL, Redis
Cloud Platforms:	Amazon Web Services (AWS), AWS EKS
Message Queuing Systems:	Apache Kafka
Testing Tools:	JUnit 5, Mockito, Rest Assured, SonarQube, JaCoCo
Monitoring & Logging:	Splunk
Version Control:	Git, GitHub
Methodologies:	Agile, Scrum, JIRA
Data Integration & Legacy Support:	ACH, SWIFT, SEPA, COBOL Interoperability
AI/ML & LLMs:	XGBoost, Random Forest, Natural Language Processing (NLP), Large Language Models (LLMs) for anomaly detection and compliance automation

PROFESSIONAL EXPERIENCE:

Morgan Stanley- NY| Full Stack Developer | Jan 2024 – Present

- Built modular and scalable microservices with Spring Boot, Java, and Spring Cloud (Eureka, Config Server, API Gateway) to streamline digital loan origination, KYC checks, and payment workflows.
- Increased financial transaction API throughput by 42% by implementing GraphQL with Next.js SSR, resulting in faster rendering and reduced load times on high-traffic B2B dashboards.
- Achieved flawless PCI DSS and SOX audit compliance by deploying Spring Security mechanisms—OAuth 2.0, RBAC, and tokenization—to safeguard PII and transaction metadata.
- Designed and deployed responsive portfolio analytics dashboards using React.js, Redux Toolkit, and Tailwind CSS, providing auditors and compliance teams with real-time insights.
- Developed backward-compatible RESTful and SOAP APIs for ACH, SEPA, and SWIFT tracking, ensuring seamless integration with legacy COBOL-based financial systems.
- Automated end-to-end DevOps pipelines with Jenkins, GitHub Actions, Docker, and Helm; deployed microservices to AWS EKS, ensuring high availability in trading environments.
- Enforced secure authentication and authorization with JWT, OAuth 2.0, and OIDC for sensitive banking applications, including loan records, mortgage systems, and credit scoring.

- Integrated LLM-powered intelligent assistants with AI/ML algorithms (XGBoost, Random Forest) to automate loan application anomaly detection, generate real-time creditworthiness insights, and support auditors with natural language query processing across compliance datasets.
- Built fraud detection dashboards in Splunk by integrating AML rule sets with transactional logs, reducing fraud identification times by 36%.
- Ensured 90% test coverage across unit, integration, and contract testing using JUnit 5, Mockito, and Rest Assured, with code quality enforced via JaCoCo and SonarQube.
- Leveraged Oracle 19c, MongoDB, and Redis with Hibernate JPA and Spring Data to enable real-time credit risk analytics and low-latency caching for high-volume financial data.

TCS- India | Full Stack Developer | May 2019 – Dec 2022

- Designed and developed responsive front-end user interfaces for HDFC Bank's mobile application using Angular and HTML5, enhancing user engagement by 25%.
- Developed dynamic forms and dashboards with Angular Reactive Forms and RxJS, ensuring smooth state management and real-time updates.
- Engineered the UPI module for the HDFC App, optimizing payment processing speed by 20% for over 2 million users through efficient API integration and streamlined workflows.
- Engineered scalable microservices using Spring Boot and Hibernate, handling high-volume financial transactions with optimized ORM mappings and connection pooling.
- Built QR code scanning capabilities and implemented deep linking on Android using Java, ensuring smooth in-app payment completion with a 15% reduction in transaction drop-offs.
- Developed fraud prevention mechanisms by implementing real-time blocking functionality, reducing fraudulent transactions by 15% through advanced algorithmic checks.
- Delivered a comprehensive credit card management module within the HDFC app, allowing users to manage credit limits, block/unblock cards and modify billing cycles via secure RESTful APIs.
- Created a dynamic EMI conversion feature for eligible credit card transactions based on transaction type, increasing user adoption of flexible repayment options by 30%.
- Architected a centralized loan dashboard leveraging Spring Boot and Hibernate, enabling users to view active loans, EMI schedules, outstanding balances, loan tenure and download essential documents such as interest certificates and welcome letters directly from the app.
- Worked in Agile Scrum teams, delivering Java back-end and Angular front-end features in 2-week sprints with 90% on-time delivery.

EDUCATION:

Master of Computer Science - State university of New York at New Paltz, New Paltz, NY, USA

Bachelor of Information Technology - Sagi Rama KrishnamRaju College of Engineering Andhra Pradesh, India.
